Applications

E-12MB

The P Audio E Series II features a very versatile 12 inch (312mm) transducer designed for use in professional level two way sound reinforcement systems. The E-12MB is a high performance design based around a large format 4 inch (101.6mm) diameter voice coil. This coil design will provide very high power handling and long term reliability in demanding professional applications. The multi layer voice coil utilizes high conductivity copper and very high thermal capacity adhesives to deal with the input power levels found in modern professional environments.

The E-12MB utilizes a rigid stamped steel chassis mated to a large format Ferrite based permanent magnetic system. The E-12MB has been optimized using computer based modeling techniques and is rated for operation between 55Hz and 2000Hz. This rated bandwidth is ideally suited for two way designs where the high frequency response is provided by a professional level compression driver and horn combination. If elevated level mid bass operation is specified, P Audio also offers the E-12MB as an alternative to the E-12MB. A newly developed cone material substantially improves mid band time domain response and will yield superior vocal fundamentals. When full range response is specified for a two way system the E-12MB is the ideal choice to provide excellent acoustic reproduction.
